

SEAT BELT WEBBING AND METHOD OF DYEING SAME

Abstract

- 5 A process of dyeing a seat belt within a dye range,
the seat belt comprising a woven polyester material
containing a blended hybrid fiber of the type known as
PET-polycaprolactone diblock copolymer fiber, the
process comprising the steps of: heating the webbing to
10 a preferred range while under tension and subsequently
washing, steaming, finish coating and drying the
webbing.
